Workshop: Integrating Computational Science into the Curriculum
February 16, Lookout Room, 1:30 P.M. – 3:00 P.M.

The Research Computing Days program includes a workshop led by Dr. Steven Gordon, XSEDE and Ohio Supercomputer Center Education Lead. The workshop will focus on the competencies required for students to acquire the computation and data science skills necessary to be competitive for employment in the current and future workforce. Participants will review those competencies, examples of programs that have integrated computational and data science into their curricula, and begin an assessment of the current curriculum at Boise State with respect to possible future changes to achieve similar goals. Please bring your laptop to the workshop.
